

# APPLICATION OF THE PROJECT WITH

## THE STAGES OF THE DISING THIKING

### **Empathizer:**

A large part of the Arequipa population suffers from theft day to day both in their homes and on the street, the current used Smartphone. The dissatisfaction of the population looks to issues like crime as this increases every time and with different forms of theft. Thought that you want to implement new safety systems that reduce these rates so high that they exist in the region.

### **Define:**

As main objective is to take care of part of the property of the client, implementing new security systems and notice, with which the user can be aware and be safe.

**Devise:**

Saying that your phone will be less likely to be stolen or to secure a client's home is already a way to get attention. To this we add the costs compared to those that exist in the market, and also in our case we have the electricity consumption in mind for what functions since our products are autonomous.

**Prototype:**

In the prototype the test system will be created and the presentation that it would have when going to the market, in the case of home security the elements that accompany it as sensors, panel, warning system, and in the case of cell phones, the personalized connection by model. Without affecting its design.

**Evaluate:**

At the end of the execution of the sales, the appreciation of the product will be consulted either by web page or personal form, in this way it will have the indices of acceptance by the population, from this its profitability and functionality will be evaluated in addition to achieve innovation and improve the product.
